

## Providing Better Bike Connections for the Community

This map shows the existing bicycle infrastructure within the study area, including officially designated bicycle routes, marked bicycle lanes, bicycle parking (e.g., bike racks), and Capital Bikeshare dock locations.

DDOT will use this data to identify safety and rider comfort along these corridors, to assess the availability and need for bike parking within the DDOT right-of-way, and to focus potential safety enhancements on corridors most likely to attract higher numbers of bicycle trips.
