

# THE STUDY AREA

## A Diversity of People, Communities, and Transportation

The Rock Creek East 1 Livability Study area includes several well-defined commercial business corridors, unique residential neighborhoods, schools, libraries, passive and active parks, and recreational facilities. These areas and amenities are noticeably divided by two north-south principal arterial streets and railroad/Metrorail tracks, with east-west connections facilitated mainly by collector streets and local neighborhood streets.

DDOT will examine methods to improve safety and multimodal connectivity throughout this study area.
